INTRODUCTION

Molecular Diagnostic Services (Pty) Ltd (MDS) offers a *LAB-SURE* DNA Identity testing service that uses the latest internationally accepted methods of DNA Identity.

A person's genetic makeup or DNA identity remains the same throughout life; therefore the analysis can be performed at any age (including babies).

SAMPLE COLLECTION

The *LAB-SURE* collection kit ensures a simple, painless and easy method of sample collection via a swab. We recommend that you do not eat or drink for half an hour before taking your DNA sample.

Procedure:

1. Remove the bar coded plastic tube from the plastic container.
2. Remove the swab (provided in the kit) from its wrapping.
3. Rub the swab 3 times against the inside of your cheek to collect several cheek cells.
4. Open the lid of the plastic tube (inside the lid there is a white piece of paper).
5. Press and roll the end of the swab against the paper in the lid.
6. Break off the end of the swab into the tube without touching the end of the swab.
7. Close the tube and return to the plastic container.
8. Fill in the details at the back of the plastic container and insert this into the addressed envelope.
9. Return by speed post or courier to MDS laboratory for testing.
10. The transport of this sample is not temperature dependent.

Each tube is bar coded to ensure correct identification. The bar codes are unique number sets which are allocated to each individual.

RESULTS

You will receive your personalised DNA identity card by post within 4 weeks of the laboratory receiving the sample. Please contact us if you have not received your card within this time. Strict confidentiality regarding results is maintained at all times.
